Education

Seattle University — Seattle, WA
M.S. Computer Science, Data Science — *Sep 2024 – Mar 2026*

Presidency University — Bengaluru, India
B.Tech Computer Science, AI & ML — *Mar 2020 – Jun 2024*

Experience

Software Engineer — Apr 2025 – Mar 2026
Seattle University — *Seattle, WA*

- Cut release cycles 20% with CI/CD pipelines for C# apps that run automated security scans before deployment
- Took releases from weeks to hours and ended repeat config failures by rebuilding delivery on AWS and TypeScript
- Wrote 12+ infrastructure runbooks with research, IT, and operations so releases repeat without tribal knowledge

Software Engineer Intern — Jul 2023 – Oct 2023
Finkey Consultancy Ltd — *Bengaluru, India*

- Improved retrieval 45% with a Python/FastAPI pipeline on AWS Glue, Athena, Redshift, and S3 that handles 50K+ records from 15+ sources
- Cut analyst review time 40% with PyTorch anomaly and volatility models and OpenAI API summaries feeding real-time risk classification, backed by REST endpoints and ETL jobs I wrote

Projects

Oh My Fx | *Zig, LLM Agents, MCP, CLI* | github.com/Yabuku-xD/omfx — Aug 2026

- Shipped a ∼3 MB Zig coding agent CLI with 9 model providers and 27 tools; a parse gate across 36 languages reverts any edit that breaks syntax before the model is told it worked
- Compacts context locally and keeps dropped turns as citations you can open; a deterministic allowlist DSL blocks untrusted tool output by default

SearchX | *Swift 6, WebKit, macOS* | github.com/Yabuku-xD/SearchX — Sep 2026

- Built a 12.6 MB WebKit Mac browser that opens in 324 ms and sleeps tabs after 30 idle minutes to free memory
- Applied uBlock Origin lists in WebKit's network layer so blocked ads are never requested, and implemented the :has-text and :xpath filters WebKit cannot run

Unimem | *Python, SQLite, MCP* | github.com/Yabuku-xD/unimem — Oct 2026

- Built a local MCP memory server on Python's standard library and SQLite that Claude Code, Codex, and Cursor share through one file, with no network calls
- Gated lookups on a stated reason so routine turns query nothing, capped results at three memories, and hit 96.0% top-5 recall on LongMemEval-S with no LLM

Open Source

- OpenChamber (desktop app for the OpenCode agent): contributed performance, concurrency, and settings work
- Hermes Agent (Nous Research): contributed Discord and Feishu integration fixes and Homebrew packaging
- Babylon.js (3D web engine): contributed GUI layout features

Technical Skills

Languages: Python, TypeScript, Zig, Swift, Rust, C#, SQL, Bash
AI and Agent Systems: LLM Agents, Agentic Workflows, MCP, Tool Calling, Context Engineering, Agent Evaluation, Guardrails, PyTorch
LLM Platforms: OpenAI and Anthropic APIs, Multi-Provider Inference
Backend and Cloud: REST APIs, FastAPI, ETL Pipelines, SQLite, AWS (Glue, Athena, Redshift, S3), CI/CD, DevSecOps
Platforms and Tooling: WebKit, macOS, Tree-sitter, ripgrep, LSP, Vercel, Git
