Experience

Software Developer Intern Aug 2026 – Present
Jevan | *jevan.ai* *Brooklyn, NY*

- Built a restaurant-operations app using TypeScript, Next.js and PostgreSQL, integrating read-only Toast and Square order data for cost, inventory and labor workflows
- Built a recommendation worker that computes menu embeddings in Cloudflare Containers, processes only changed dish text, and serves guest rankings from cached results without model inference during page requests
- Set up isolated Nightly and Stable environments on Cloudflare Workers with separate databases, buckets and queues, and gated Stable releases on a successful Nightly deploy and smoke check

Software Engineer Apr 2025 – Mar 2026
Seattle University *Seattle, WA*

- Built CI/CD pipelines for C# applications with automated security scans before deployment
- Rebuilt release delivery using AWS and TypeScript, eliminating recurring configuration failures

Software Engineer Intern Jul 2023 – Oct 2023
Finkey Consultancy Ltd *Bengaluru, India*

- Built a Python/FastAPI data pipeline using AWS Glue, Athena, Redshift and S3 to combine records from multiple sources into one retrieval layer
- Trained PyTorch anomaly and volatility models for real-time risk classification, wrote REST endpoints and ETL jobs to serve their results, and added OpenAI API summaries for analysts

Projects

Unimem | *Python, SQLite, MCP* | github.com/Yabuku-xD/unimem Oct 2026

- Built a local memory server that Claude Code, Codex and Cursor share through one SQLite file, using Python's standard library with no network calls
- Requires an explicit reason for each memory lookup and returns at most three memories

Bread | *Rust, Tree-sitter, ripgrep* | github.com/Yabuku-xD/bread Jul 2026

- Built a local Rust tool for coding agents that limits file-read and search output and refuses edits when a file has changed since the agent last read it
- Indexes the workspace with Tree-sitter, supports ripgrep-compatible search and tags context with its source

Oh My Fx | *Zig, MCP, CLI* | github.com/Yabuku-xD/omfx Aug 2026

- Built a coding-agent CLI that checks edited files for syntax errors and reverts broken edits before reporting success to the model
- Compacts context locally while retaining dropped turns as accessible citations, and uses an allowlist to block untrusted tool output by default

Technical Skills

Languages: Python, TypeScript, Rust, SQL, Bash, Zig, C#
Backend and Cloud: FastAPI, REST APIs, ETL Pipelines, SQLite, PostgreSQL, Cloudflare Workers, AWS Glue, Athena, Redshift, S3, CI/CD, Git

Education

Seattle University Seattle, WA
M.S. Computer Science, Data Science *Sep 2024 – Mar 2026*

Presidency University Bengaluru, India
B.Tech Computer Science, AI & ML *Mar 2020 – Jun 2024*
