Software Engineer – Backend & AI Systems – Full-Stack – Open Source

SKILLS

Languages: Python, TypeScript, JavaScript, Rust, SQL

AI & Agents: MCP (Model Context Protocol), LLM orchestration, RAG pipelines, agent evaluation, context engineering, LangChain, OpenAI API, Anthropic SDK, PyTorch

Backend & Data: FastAPI, Django, Django REST, Flask, Celery, PostgreSQL, Redis, SQLite, REST APIs, OAuth 2.1/PKCE, JWT

Frontend: React, Next.js, Vite, TypeScript, Tauri

Infrastructure: AWS (S3, Glue, Athena, Redshift), Docker, CI/CD, Git, GitHub Actions, SSL/TLS

PROJECTS

ContextForge | github.com/Yabuku-xD/contextforge | TypeScript, Python, MCP, Claude Code Apr 2026

- Shipped a production open-source Claude Code marketplace plugin – a repository intelligence layer giving AI agents persistent memory, project-level understanding, and durable cross-session continuity; 33 tagged releases serving active users.
- Engineered a batched warm indexer, hybrid keyword/embedding retrieval layer, and `forge_*` routing hooks steering agents away from broad crawls toward compact targeted flows, measurably reducing context window waste.
- Built an evaluation pipeline with a benchmark suite tracking retrieval recall accuracy and indexing performance across releases to catch regressions before shipping.

Ghosted | github.com/Yabuku-xD/Ghosted | Django, React, TypeScript, PostgreSQL, Redis, Celery, Docker Mar 2026

- Built a full-stack data intelligence platform end-to-end – REST API, async job infrastructure, and React frontend – unifying 119K+ H-1B records, 23K+ company profiles, 9K+ salary entries, and 4.4K+ live job postings.
- Shipped Celery + Redis async infrastructure for ATS ingestion, deduplication, TF-IDF resume matching, cached pagination, and PDF generation, dockerized throughout and configured for Vercel deployment.

SoundunCloud | github.com/Yabuku-xD/SoundunCloud | Rust, Tauri, React, TypeScript, Axum Mar 2026

- Built a Windows desktop app with Tauri + React and a Rust/Axum OAuth 2.1 broker – PKCE, deep-link callbacks, encrypted one-time tickets, refresh-token rotation, and in-app updates with installer fallback; zero third-party auth dependencies.

EXPERIENCE

Finkey Consultancy Ltd Jul 2023 – Oct 2023

Software Engineer Intern Bengaluru, India

- Designed and deployed a production data pipeline (Python, FastAPI, AWS Glue, Athena, Redshift, S3) ingesting 50K+ financial records, improved retrieval efficiency by 45% and supported risk analysis on \$30K in capital exposure.
- Built PyTorch anomaly and volatility detection models with OpenAI API integration for real-time risk classification and natural-language summary generation, cutting manual analyst review time by 40%.

Seattle University Facilities Apr 2025 – Mar 2026

Technical Operations Engineer Seattle, Washington

- Reduced operational downtime by ~20% across facilities serving 500+ users through structured root-cause analysis, proactive inspection workflows, and authored runbooks that standardized incident response across the team.

EDUCATION

Seattle University Sep 2024 – Mar 2026

M.S. Computer Science – Data Science Specialization Seattle, Washington

Presidency University Mar 2020 – Jun 2024

B.Tech Computer Science – AI & ML Specialization Bengaluru, India
